(symbolises hope for the French economy)**

**Grenoble, November 30, 2010 - MOOTWIN, innovative company specialized in the real time applications for smartphone, has won on Friday, November 19, 2010 the “Espoirs de l’Economie” Trophy, awarded by the Chamber of Commerce and of Industry of Grenoble and its partners. For the team of MOOTWIN, it is an invaluable mark of recognition of the economic players who supported the creation and the development of the company since 2008.**

The year 2010 has particularly been rich for Mootwin. Concretization of prestigious co-operations, raising of funds and opening of a Paris office, achievements which illustrate that the company is on the path of a perennial and constant growth. Obtaining this Trophy, given by Jean-Pierre GILET for the SCHNEIDER Group, symbolizes for Claude LEMARDELEY and his team the recognition of the Isère economic players: “The technology that we designed and developed is the heart of the offer which we can offer our customers today. But we certainly do not forget that without the support of the structures of assistance in the creation which assisted us, and that of the contractors who believed in our project, all this would not have concretized so quickly. We are particularly proud to receive this prize today. This has happened when Mootwin is getting ready to cross a new growth milestone, and I am very happy to note that the Isère economy depends on us. It is a challenge which we take very seriously.”

**About MOOTWIN**

MOOTWIN is supplier of applications for smartphones to the department of key accounts and brands wishing to develop a new customer relationship on mobile. The applications are based on Mootwin Foundation, a platform of centralized interconnection designed to effectively respond to the new challenges posed by the general public mobile applications: comfort of use, safety, Volumetry, cost of operation and maintenance.
